2. (a) Use the standard results for summations to show that for all positive integers n  $\sum_{r=1}^{n} r(r-1)^{2} \equiv \frac{1}{12} n(n+1)(n-1)(an+b)$ 

where 
$$a$$
 and  $b$  are integers to be determined.

The determine the value of 
$$n$$
 that satisfy  $\sum_{i=1}^{n} a_i$ 

$$\sum_{n=0}^{\infty} r(r-1)^2 = \sum_{n=0}^{\infty} 5r$$

$$\sum_{r=1}^{n} r(r-1)^2 = \sum_{r=1}^{n} 5r$$
