

12. (a) Prove that

$$\frac{\cos 3\theta}{3\sin \theta} + \frac{\sin 3\theta}{3\cos \theta} = \frac{2}{3} \cot 2\theta, \quad \theta \neq (90n)^\circ, \quad n \in \mathbb{Z}.$$

(4)

(b) Hence solve, for $0^\circ < \theta < 180^\circ$, the equation

$$\frac{\cos 3\theta}{3\sin \theta} + \frac{\sin 3\theta}{3\cos \theta} = 1$$

giving any solutions to one decimal place.
