

Question	Scheme	Marks	AOs
12(a)	$N_A - N_B = (3+4) - (8-6) = \dots$	M1	3.4
	5000 (subscribers)	A1	3.2a
		(2)	
(b)	$(T=)3$	B1	3.4
	This was the point when company A had the lowest number of subscribers	B1	2.4
		(2)	
(c)			
	$-t+7 = 2t+2$ o.e. or $t+1 = 14-2t$ o.e.	B1	3.1a
	$-t+7 = 2t+2$ o.e. $\Rightarrow t = \dots$ or $t+1 = 14-2t$ o.e. $\Rightarrow t = \dots$	M1	3.4
	One of the two critical values $t = \frac{5}{3}$ or $t = \frac{13}{3}$	A1	1.1b
	Chooses the outside region for their two values of t Both of $t < \frac{5}{3}$, $t > \frac{13}{3}$	A1ft	2.2a
	$\left\{ t \in \square : t < \frac{5}{3} \right\} \cup \left\{ t \in \square : t > \frac{13}{3} \right\}$	A1	2.5
	(5)		
(d)	The number of subscribers will become negative (when $t > 7$)	B1	3.5b
		(1)	

(10 marks)

Notes

(a)

M1: Uses the models to find the difference when $t=0$. Allow slips in evaluating N_A and N_B but it must be clear that $t=0$ is being used. Just 5 with no working implies M1.

A1: 5000 or 5 thousand (subscribers) (5 is A0)

(b)

B1: $(t/T=)3$ Just look for the number 3 so e.g. $t > 3$ or e.g. “just after 3” is acceptable.

If more than one value is offered then score B0 unless it is clear that the 3 is intended.

Must be seen in (b) not just on their diagram.

B1: Any acceptable reason e.g.

- This was the point when company A had the lowest number of subscribers
- After this point the number of subscribers started to increase
- It is the minimum
- Condone “it is the turning point”
- The graph changes direction
- It is the vertex
- The gradient becomes positive
- N_A increased

Allow this mark even if the first B mark was not scored e.g. $T = 3.5$ because the graph starts to increase scores B0B1

Do not allow contradictory statements.

Do not allow:

- The graph reflects at $t = 3$ on its own without further clarification

(c)

B1: Forms one valid equation (allow an equation or any inequality sign)

M1: Attempts to solve one valid equation (allow an equation or any inequality sign)

A1: For either $t = \frac{5}{3}$ or $t = \frac{13}{3}$ only (allow an equation or any inequality sign) or exact equivalent

Must be seen or used in part (c).

See notes below for attempts that use "squaring" to find the values of t .

A1ft: Chooses the outside region for their **two** values of t where $t > 0$.

So for $t = a$ and $t = b$ where $0 < a < b$ should be $t < a, t > b$. Allow $,$ /or/and/ \cup / \cap

Condone if incorrectly combined e.g. " $\frac{13}{3} < t < \frac{5}{3}$ " but **not** " $\frac{5}{3} < t < \frac{13}{3}$ "

A1: Fully correct solution in the form $\left\{t : t < \frac{5}{3}\right\} \cup \left\{t : t > \frac{13}{3}\right\}$ or $\left\{t \mid t < \frac{5}{3}\right\} \cup \left\{t \mid t > \frac{13}{3}\right\}$ or

$\left(0, \frac{5}{3}\right) \cup \left(\frac{13}{3}, 5\right)$ either way around but condone $\left\{t < \frac{5}{3}\right\} \cup \left\{t > \frac{13}{3}\right\}$, $\left\{t : t < \frac{5}{3} \cup t > \frac{13}{3}\right\}$,
 $\left\{t < \frac{5}{3} \cup t > \frac{13}{3}\right\}$ or $\left(-\infty, \frac{5}{3}\right) \cup \left(\frac{13}{3}, \infty\right)$.

It is not necessary to mention \mathbf{R} , e.g. $\left\{t : t \in \mathbf{R}, t > \frac{13}{3}\right\} \cup \left\{t : t \in \mathbf{R}, t < \frac{5}{3}\right\}$

Look for $\left\{ \right\}$ and \cup or condone $\left(-\infty, \frac{5}{3}\right) \cup \left(\frac{13}{3}, \infty\right)$

Do not allow solutions not in set notation such as $t < \frac{5}{3}$ or $t > \frac{13}{3}$.

Note that a lower bound for $t < \frac{5}{3}$ and an upper bound for $t > \frac{13}{3}$ are not required but may be

included e.g. $\left\{t \in \square : 0 < t < \frac{5}{3}\right\} \cup \left\{t \in \square : \frac{13}{3} < t < 5\right\}$ or $\left\{t \in \square : 0, t < \frac{5}{3}\right\} \cup \left\{t \in \square : \frac{13}{3} < t, 5\right\}$

Note that the marks in this part require **valid** equations to be solved. They must have removed the mod brackets and arrived at an equation equivalent to $-t + 7 = 2t + 2$ or $t + 1 = 14 - 2t$ (all you need to check initially is whether their equation **without mod brackets** is equivalent to one of these).

Note that $\left\{t : t < \frac{5}{3}, t > \frac{13}{3}\right\}$ is condoned for the A1ft but not for the final A1.

If x is used in their set notation then final A0, but we would condone this for the penultimate A1ft.

See notes below for answers given with no working.

(d)

B1: Requires any indication that the number of subscribers will become negative. E.g.

- It allows negative subscribers (which isn't possible)
- $8 - |2t - 6| \dots 0 \Rightarrow t, 7$ so not valid after $t = 7$ but condone not valid for t after (any value above 7)

But not

- Subscribers will become zero

Guidance for attempts that use “squaring” to find the values of t in (c):**Way 1:**

$(-t+7)^2 = (2t+2)^2$ o.e. or $(t+1)^2 = (14-2t)^2$ o.e.	B1	3.1a
$(-t+7)^2 = (2t+2)^2 \Rightarrow t = \dots$ o.e. (Gives -9 and $\frac{5}{3}$) or $(t+1)^2 = (14-2t)^2 \Rightarrow t = \dots$ o.e. (Gives 15 and $\frac{13}{3}$)	M1	3.4
One of the two critical values $t = \frac{5}{3}$ or $t = \frac{13}{3}$	A1	1.1b
Chooses the outside region for their two values of t Both of $t < \frac{5}{3}$, $t > \frac{13}{3}$	A1ft	2.2a
$\left\{ t \in \square : t < \frac{5}{3} \right\} \cup \left\{ t \in \square : t > \frac{13}{3} \right\}$	A1	2.5

Way 2:

$ t-3 +4 = 8 - 2t-6 \Rightarrow t-3 + 2t-6 = 4 \Rightarrow 3t-9 = 4$ o.e.	B1	3.1a
$(3t-9)^2 = 4^2 \Rightarrow 9t^2 - 54t + 81 = 16 \Rightarrow 9t^2 - 54t + 65 = 0 \Rightarrow t = \dots$ (Gives $\frac{5}{3}$ and $\frac{13}{3}$)	M1	3.4
One of the two critical values $t = \frac{5}{3}$ or $t = \frac{13}{3}$	A1	1.1b
Chooses the outside region for their two values of t Both of $t < \frac{5}{3}$, $t > \frac{13}{3}$	A1ft	2.2a
$\left\{ t \in \square : t < \frac{5}{3} \right\} \cup \left\{ t \in \square : t > \frac{13}{3} \right\}$	A1	2.5

B1: Forms one valid equation and squares both sides (allow an equation or any inequality sign)May be implied by e.g. $(t-3+4)^2 = (8-(2t-6))^2$ Alternatively, arrives at $3t-9 = 4$ (o.e.) as in way 2.**M1:** Attempts to solve one valid equation after squaring both sides (allow an equation or any inequality sign). Note that it is acceptable to just solve $3t-9 = 4$ **A1:** As in main scheme. **A1ft:** As in main scheme. **A1:** As in main scheme.

Note: the following is common and scores 00000.

$$|t-3|+4 = 8 - |2t-6| \Rightarrow (t-3)^2 + 4 = 8 - (2t-6)^2$$

Which typically leads to

$$t = \frac{15 \pm 4\sqrt{15}}{5}$$

Guidance for answers only in part (c):

$t \dots \text{awrt}1.7$ or $t \dots \text{awrt}4.3$ where ... is any inequality or equation scores **11000**

$t \dots \frac{5}{3}$ or $t \dots \frac{13}{3}$ where ... is any inequality or equation scores **11100** for one correct c.v.

Both $t < \text{awrt}1.7$ and $t > b$ where $\left\{ b > \frac{5}{3} \right\}$ scores **11010** for outside region.

Both $t < a$ and $t > \text{awrt}4.3$ where $\left\{ a < \frac{13}{3} \right\}$ scores **11010** for outside region.

Both $t < \frac{5}{3}$ and $t > b$ where $\left\{ b > \frac{5}{3} \right\}$ scores **11110** for outside region with one correct.

Both $t < a$ and $t > \frac{13}{3}$ where $\left\{ a < \frac{13}{3} \right\}$ scores **11110** for outside region with one correct.

Both $t < \frac{5}{3}$ and $t > \frac{13}{3}$ scores **11110** for outside region with one correct.

Fully correct e.g. $\left\{ t : t < \frac{5}{3} \right\} \cup \left\{ t : t > \frac{13}{3} \right\}$ scores **11111**
