

Question			Answer	Mark	AO	Guidance
2	(a)	(i)	$\overrightarrow{AB} = \begin{pmatrix} -3 \\ 6 \end{pmatrix} - \begin{pmatrix} -4 \\ 3 \end{pmatrix} \text{ or } \begin{pmatrix} 1 \\ 3 \end{pmatrix}$ $\overrightarrow{BC} = \begin{pmatrix} -1 \\ 12 \end{pmatrix} - \begin{pmatrix} -3 \\ 6 \end{pmatrix} \text{ or } \begin{pmatrix} 2 \\ 6 \end{pmatrix}$ $\overrightarrow{BC} = 2 \overrightarrow{AB} \quad \text{or} \quad \overrightarrow{BC} \text{ is a multiple of } \overrightarrow{AB}$ <p>Hence <math>B</math> lies on <math>AC</math></p>	M1	1.1	One of these. Attempt $\mathbf{b} - \mathbf{a}$ or $\mathbf{c} - \mathbf{b}$ or similar
			<p><b>Alternative method 1:</b></p> $\overrightarrow{AB} = \begin{pmatrix} -3 \\ 6 \end{pmatrix} - \begin{pmatrix} -4 \\ 3 \end{pmatrix} \text{ or } \begin{pmatrix} 1 \\ 3 \end{pmatrix}$	A1	2.1	Dep correct $\overrightarrow{AB}$ and $\overrightarrow{BC}$ Multiple (2) not required, but if given must be correct.
				M1		One of these. Attempt $\mathbf{b} - \mathbf{a}$ and $\mathbf{c} - \mathbf{a}$ or similar

$$\overrightarrow{AC} = \begin{pmatrix} -1 \\ 12 \end{pmatrix} - \begin{pmatrix} -4 \\ 3 \end{pmatrix} \text{ or } \begin{pmatrix} 3 \\ 9 \end{pmatrix}$$

$$\overrightarrow{AC} = 3\overrightarrow{AB} \quad \text{or } \overrightarrow{AC} \text{ is a multiple of } \overrightarrow{AB}$$

Hence  $B$  lies on  $AC$

**Alternative method 2:**

Gradient of line  $AC$  is  $m = 3$

Equation of line  $AC$  is

$$y - (3) = 3(x - (-4))$$

$$(y = 3x + 15)$$

At  $x = -3$ ,  $y = 3(-3) + 15 = 6$  (i.e.  $B$ )

Hence  $B$  lies on  $AC$

**Alternative method 3:**

Gradient of line  $AB$  is 3

AND Gradient of line  $BC$  is 3

As  $B$  lies on both  $AB$  and  $BC$ , and  $AB$  and  $BC$  have the same gradient,  $B$  lies on  $AC$ .  
(OR therefore  $A, B, C$  are colinear)

**A1**

Dep correct  $\overrightarrow{AB}$  and  $\overrightarrow{AC}$

Multiple (3) not required, but if given must be correct.

**M1**

Find (gradient and) equation of line  $AC$  – need not be simplified

**A1**

Substituting in  $x$ -coordinate of  $B$  (or both  $x, y$ ) to show consistent  
Dep on correct equation

**M1**

Must both be explicitly stated for this method.

**A1**

Must make a convincing argument (not just conclude directly from two gradients) www.

[2]

**2** (a) (ii)  $AB : BC = 1 : 2$

**B1**

**1.1**

Must be a ratio (but may be equivalent e.g.  $2 : 4$ )

[1]

**2** (b)  $Q$  marked at  $(4, 2)$  or  $(4, 2)$  stated  
Magnitude =  $2\sqrt{2}$  or  $\sqrt{8}$  or 2.83 (3 sf)

**B1**

**3.1a**

May be implied by correct magnitude or direction

**B1**

**1.1**

Accept any unambiguous indication of the direction of  $\overrightarrow{PQ}$  e.g.  
“towards the  $x$ -axis along  $x + y = 6$ ” OR an arrow on diagram

Direction =  $-45^\circ$  or  $315^\circ$

**B1**

**1.1**

OR stating direction together with the column vector  $\overrightarrow{PQ} = \begin{pmatrix} 2 \\ -2 \end{pmatrix}$   
Condone  $135^\circ$  as a bearing (but must state “bearing”)

[3]

<b>2</b>	<b>(c)</b>	$\begin{pmatrix} 4 \\ 3 \end{pmatrix} \text{ and } \begin{pmatrix} 0 \\ 5 \end{pmatrix}$	<b>B1</b> <b>B1</b> <b>[2]</b>	<b>3.1a</b> <b>1.1</b>	<b>SC.</b> Either or both “correct” but coordinates: max <b>SCB1</b>
----------	------------	--	--------------------------------------	---------------------------	--
