Question		Answer	Marks	AO	Guidance
2		**DR**			
			M1	**1.1a**	Attempt to differentiate at least two terms
		$\left[\frac{dy}{dx}\right] = 6x + 2 \times \frac{3}{2}x^{\frac{1}{2}} - 1$	**A1**	**1.1**	At least first two terms correct
		When $x = 4, \frac{dy}{dx} = [6 \times 4 + 3 \times 2 - 1 =]29$	**A1**	**1.1**	Cao
			[3]
